

Parley

Annotated screen tour

A walk-through of every page of the iPad AAC cockpit, captured at 1366 × 1024 (landscape iPad) with notes on each control.

1. Home cockpit — /

The live conversation surface. Always one tap from speech, suggestions, and history.

What you're looking at

Record (green) — Starts/stops the ElevenLabs Scribe live transcript. Streams interim tokens into the right-hand Live Transcript pane.

Type box — James types rough text; AI cleans grammar and pushes it to Speak.

Speak — Sends the typed/selected text to ElevenLabs TTS in his cloned voice.

Recent / Helpers / Settings — Top-right nav into the three sub-apps.

Choose people / Event — Scopes the conversation to known speakers and an optional planned event so suggestions use the right memory.

Suggestions grid — 3×3 grid of Gemini-generated replies — left-aligned with conversation context. 'Refresh' regenerates.

Quick replies row — Fixed-fire short utterances (Yes / No / Give me a moment / ...) for fast turns.

Mood selector — Re-prompts the LLM with a tonal bias (Normal, Calm, Excited, Sad, Upset, Empathetic, Amused).

Live Transcript — Interim + final STT output, scoped to the active conversation.

Speakers panel — MFCC-based voiceprint clusters appear as they speak; 'New' adopts an unknown voice; 'Ask' triggers a clarifying suggestion.

2. Recent conversations — /recent

Searchable history of every captured conversation, with auto-generated summaries and highlights.

72 conversations

5/15/2026, 9:33:07 PM · Jack

Jack was present and tested whether the turn-taking/speaker identification setup was working. The brief exchange was mainly a technical check rather than a substantive conversation with James.

• Jack checked if the system could identify who was speaking.

• The conversation appears to have been a setup/test of turn pattern functionality.

5/15/2026, 9:02:26 PM · Jack, Matt

Jack and Matt tested the AAC/speaking timing while driving on a Sunday afternoon. Matt described enjoying a lovely day with Nana, Laurie, and Juno, and said they were driving through the outskirts of Tauranga via Waikī toward the Karangahake Gorge.

• Jack identified himself and tested the setup.

• Matt said he was enjoying the Sunday afternoon drive.

• They had spent a lovely day with Nana, Laurie, and Juno.

• Route mentioned: outskirts of Tauranga, via Waikī, toward Karangahake Gorge.

In progress...

5/15/2026, 9:02:22 PM

In progress...

5/15/2026, 6:47:35 PM · Matt, Jack

James was present with Matt and Jack while they tested an AAC/transcription app’s speaker labeling and memory behavior. The conversation focused mostly on whether the system could correctly identify speakers after confirmations and pauses, rather than on a social topic.

What you're looking at

Back arrow — Returns to the Home cockpit.

Search field — Full-text search across summary, highlights, and people names.

People filter — Narrow to conversations that include a specific known person.

Locations filter — Narrow by saved location (matched against GPS at capture time).

Sort dropdown — Newest / Oldest first.

Conversation card — Date · participants · AI-distilled paragraph summary, followed by bullet highlights.

'In progress...' cards — Conversations whose post-pipeline (re-diarize + distill) is still running in the background.

72 conversations — Total count of stored sessions for this account.

3. Helpers — /helpers

Drafting workbench for replies that live outside the live cockpit (Messages, Email, Facebook).

←

Messages

Email

Facebook

Apple Messages has no web version. Paste the message you received below, type a rough reply, then copy the polished version and paste it into Messages on your iPad.

Message you received

Paste the iMessage / text here...

Context (optional)

e.g. from his son Jack

Type roughly — what do you want to reply?

e.g. yep on my way 10 min

Tip: Cmd/Ctrl + Enter to draft.

Draft reply

What you're looking at

Tabs — Switch between Messages, Email, and Facebook drafting modes — each tuned with its own tone and length defaults.

Message you received — Paste the inbound text so the AI has full context before drafting.

Context (optional) — Free-form hint, e.g. 'from his son Jack' — feeds into the prompt.

Type roughly — James writes a rough draft in his own voice; AI tidies and lengthens appropriately.

Cmd/Ctrl + Enter — Keyboard shortcut to fire the draft without leaving the textarea.

Draft reply — Calls the Gemini draft function, then renders the polished reply with copy-to-clipboard.

4. Settings → About James

The character profile that anchors every AI suggestion in James's real voice.

Reference documents

Attach background docs about James — life history, medical notes, favourite stories, anything the AI should know. Their contents are included with every suggestion. Plain-text files only (.txt, .md, .csv, .json, .yaml, .xml, .html). Each file is capped at ~60k characters.

Attach documents

No documents attached yet.

What you're looking at

Tab bar — About James / People / Locations / Events / System.

Display name & Age — Used in prompts and shown to other carers on shared accounts.

Background — Multi-paragraph life context — family, where he lives, medical reality. Injected verbatim into every suggestion prompt.

Personality — Adjectives that nudge tone (e.g. 'warm, dry-witted, hates small talk').

Humor style / Communication style — Two short fields that steer phrasing register.

Topics he loves / avoids — Soft retrieval signal — boosts/penalises suggestions that touch these topics.

Signature phrases — Verbatim turns of phrase the model is told to reuse so replies sound like him.

Current life context — Short, frequently-updated 'what's happening right now' — recent events, what's coming up.

Anything else — Catch-all freeform field.

Save profile — Writes to Dexie and queues a cloud sync.

Reference documents — Attach plain-text files (life history, medical notes) — capped ~60k chars each, included with every suggestion.

5. Settings → People

The address book the speaker-ID system and prompt builder pull from.

What you're looking at

People list — All known contacts with their relationship label. Selecting one opens the editor on the right.

+ button — Add a new person.

Search — Filter the list by name.

Edit / delete — Top-right of the detail pane.

Stat cards — Conversations count, last-seen date, and memory count for this person.

Common locations — Auto-derived from where conversations with this person tend to happen.

Interests / Notes — Free-text fields fed into prompts.

Voice recognition — Record 3–8 second clean voice samples; the VoiceSampleRecorder computes a 20-dim MFCC voiceprint stored on-device.

Background documents — Plain-text dossier specific to this person.

Key facts (auto-learned) — Facts the post-conversation pipeline extracts from prior chats.

Preferences / Recent events / Open follow-ups — Live memory slots updated after each conversation.

6. Settings → Locations

Named places that GPS-snap conversations and people to a sense of geography.

What you're looking at

Saved locations list — Name, latitude/longitude, and snap radius (metres) — used to auto-tag conversations.

+ Add — Opens the MapPicker — drop a pin and set the radius.

Trash icon — Delete a location (does not affect past conversations already tagged with it).

Right pane — Empty until a location is selected, then shows the editable detail with the MapPicker preview.

7. Settings → Events

Pre-stage prep for upcoming meetings — agenda, attendees, AI-generated key points & questions.

AI PREP

Prompt for the AI

Steer what kinds of points/questions to generate (e.g. 'Interview a new care worker — focus on dementia experience, manual handling, weekend availability').

Generate key points & questions

KEY POINTS TO MAKE

+ Add

Nothing yet — generate with AI or add your own.

KEY QUESTIONS TO ASK

+ Add

Nothing yet — generate with AI or add your own.

What you're looking at

Upcoming / Past tabs — Filter the left-hand event list by time.

Event list — Selectable cards; the right pane is the editor for the current event.

Event name / When — Freeform title and freeform date string (or pick via the calendar button).

Where — Pick a saved location or type a freeform venue.

Key info — Purpose, agenda, anything the AI should know about the meeting.

People at this event — Toggle which known contacts will be there — drives suggestion personalisation when the event is selected on Home.

Reference documents — Attach CVs, briefs, agendas. Fed in when this event is the active context.

AI Prep — Prompt — Optional steering instruction (e.g. 'focus on dementia experience').

Generate key points & questions — Calls Gemini to produce a bullet list of points to make and questions to ask, which then become one-tap suggestions on Home.

8. Settings → System

Account, voice, model, display, location, storage, and the background style-learning pipeline.

What you're looking at

Account & cloud backup — Shows signed-in email. 'Back up now' flushes the local Dexie store to Supabase; 'Sign out' wipes the local cache after a final sync.

Voice — Expand to pick the ElevenLabs voice ID, stability/similarity, and per-clip volume.

AI models — Choose the suggestion model (Gemini Flash vs Pro) and per-task overrides.

Display size — Scale the cockpit UI up for low-vision use.

Location — Toggle whether GPS is read at conversation start; choose snap behaviour.

Storage & privacy — Local DB size, export, wipe-on-device, retention policy.

Style profile — Background job that distils picked-vs-ignored suggestions into a compact style profile (formality, openers, taboo phrases). Runs at most once every 12 hours.

Rebuild style profile — Force a fresh distillation now — surface here also reports the last attempt status (e.g. 'AI error 400').
